Sequence 13001/c

Sequence 13001, Application US/09949016

Sequence 13001, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILE REFERENCE: CLO01307

CURRENT PILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR PILING DATE: 2000-10-03

PRIOR PELLING DATE: 2000-10-03

PRIOR PELLING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 13001

LENGTH: 136265

GENERAL INFORMATION:

APPLICANT: Keith Weinstcock et al

APPLICANT: Keith Weinstcock et al

ITILE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAL

TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196 132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-08-13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-00-949-016-13418

Sequence 13418, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craiq et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT APPLICATION NUMBER: 06/241,755

PRIOR FILING DATE: 2000-04-14

PRIOR PLILING DATE: 2000-10-20

PRIOR PLILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 66/237,768

PRIOR FILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR PLILING DATE: 2000-10-03

PRIOR PLILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR PLILING DATE: 2000-10-08

NUMBER OF SEQ ID NOS: 207012
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastroduodenal diseases.

Claim 5; Page 155; 184pp; English.

This 5' primer is used with a 3' primer (see AAV07970) in the PCR amplification of Helicobacter, e.g. Helicobacter pylori, genomic DNA in order to obtain DNA (see AAV07963) encoding the unprocessed form of a 32 kDa polypeptide (see AAW73034) designated GHPO 1360. The isolated

It was isolated from Helicobacter pylori and encodes a Hipylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and ulcers. They can also be used for the production of antibodies. The products can also be used for the
polynucleotide, and encoded polypeptide, can be used to develop vaccines for the treatment and prevention of Helicobacter infections. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastrointestinal diseases.

The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persiste even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vacches to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma). (Updated on 20-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Helicobacter pylori antigens and related nucleic acid sequences - useful in serological diagnosis and protective vaccines, providing long-lasting immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoseactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immunosent seponse that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma). (Updated on 20-MAR-2003 to correct PP field.)
                                                                                                                                                                                                                      New Helicobacter pylori antigens and related nucleic acid sequences -
useful in serological diagnosis and protective vaccines, providing long-
lasting immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GHPO 1360; infection; gastritis; ulcer; vaccine; diagnosis; therapy; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoceactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly ensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gasint H. pylori infection and related diseases (gastritis, peptic ulcer, gasint H. pylori infection and related diseases (gastritis, peptic ulcer, gasint H.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Helicobacter pylori antigens and related nucleic acid sequences - useful in serological diagnosis and protective vaccines, providing long-lasting immune response.

Inducing immune response to Helicobacter useful for treating Helicobacter pylori infection, by administering immunogenic Helicobacter polypeptide admixed with adjuvant having heat-liable toxin of Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method for inducing protective immune response to Helicobacter infection. The method comprising administering to a mammal by injection an immunogenic Helicobacter pylori polypeptide comprising a subunit of H.pylori urease admixed with an adjuvant having one or more heat-liable toxin of Bscherichia coli (LTP), B subunit of LT inducing an immune response to Helicobacter infection in a mammal. The method is useful for both treatment and prevention of H.pylori infection. The invention is useful as vaccine. The present sequence is Helicobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytoplasmic; vaccine; prevention; treatment; infection; envelope; identification; binding compound; bacteria; life cycle; activator; inhibitor; duodenal ulcer disease; chronic gastritis; diagnosis; bacterium; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This DNA sequence codes for a 32 kDa Helicobacter pylori polypeptide (see AAW73034) designated GHPO 1360. A polynucleotide encoding the unprocessed, or the mature, GHPO 1360 can be obtained from genomic DNA by CR unprocessed, or the mature, GHPO 1360 can be obtained from genomic DNA by CR amplification (see AAW72001, AAW07912-21 and AAW07953-64) encoding a can be compared to 75 kDa Helicobacter polypeptides (see AAW73012-32), GHPO 1360 cand a 50 kDa polypeptide (see AAW73015). These polymucleotides were initially identified in a search of H. pylori genomic databases. DNA cassetters for expression of the Helicobacter proteins (unprocessed or mature forms) in prokaryotic or eukaryotic cells are provided. The polymucleotides can be used in vacciness to prevent or treat Hb infection in a mammal. Viral (especially poxvirus) or bacterial vectors are used. Products and methods of the invention allow treatment and prevention of gastroducdenal diseases associated with Hb infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. Diagnostic and detection methods are also provided. GHPO 1360 was demonstrated to be a protective antigen. (Updated on 25-MAR 2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immune response; Helicobacter infection; adjuvant; heat-liable toxin; LT;

AAXI2938 to AAXI391 represent these nucleotide sequences which are primary nucleotide sequences; also known as contigs. The computer-based system can identify fragments of the Enterococcus facetals genome with commercial importance. The products can be used to detect the presence of Enterococcus facetals in samples. They can also be used for diagnosing Enterococcus facetals in samples. They can also be used for diagnosing Enterococcus facetals in samples which can be used to modulate the disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus facetals or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus facetals nucleotide sequences can be used in vaccines to
                                                                                New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Computer readable medium having recorded on it a Enterococcus faecalis nucleotide sequence useful for detecting diseases related to Enterococcus infections in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Computer readable medium; Enterococcus faecalis; microbe; growth; pathogenicity; vaccine; resistance; Enterococcal infection; commercial; therapeutic; industrial; fermenting; sugar source; metabolite; vaccine; bioccite technology; antibacterial; modulator of nucleic acid expression;

The protein may be used in a vaccine to prevent or treat H.

The protein may be used in a vaccine to prevent or treat H.

The pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of H.

The DNA and probes derived from it may be used for the identification of H.

The DNA and probes complementary to the DNA act as antisense sequences, and can be used to prevent the translation of H. pylori mkNA. Antibodies and distribution of H. pylori—specific antigens. The genemic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed to for one for a least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF mathematical and all and the predicted from various ore processed to the processed of the processed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                              Helicobacter pylori nucleic acid sequences and encoded polypeptide(s) useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

New bacterial cell expressing three or more coli surface antigens, useful for manufacturing a medicament, i.e. a vaccine, for vaccination against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a bacterial cell expressing three or more coli surface (CS) antigens. The bacterial cell is useful for manufacturing a medicament, i.e. a vaccine, for vaccination against diarrhoea. The vaccine is also useful for targetting bacterial infection. The present sequence is Bacherichia coll CS3 operon containing cstB, cstA, cstC cstD, cstE, cstG and cstH gene. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; carcinoma associated; oncogene; carcinoma; cancer; breast;

              The present invention relates to a new computer readable medium with an Enterococcus faecalis nucleotide sequence. The invention is useful to diagnose the presence of E.faecalis in a sample or determining the presence of a specific microbe in a sample or determining the confer modulating the growth or pathogenicity of E.faecalis, in a vaccine to confer resistance to Enterococcal infection, for commercial, therapeutic and industrial purposes, and for fermenting a particular sugar source or to produce a particular metabolite. The invention is useful for detecting diseases related to Enterococcus infections in animals, and for detecting E.faecalis using biochip technology. The present nucleic acid sequence represents an Enterococcus faecalis contig DNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     recombinant carcinoma associated proteins (ADAD1482-ADAD3034), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a CA nucleic acid, a polypeptide (specially an antibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or fragments thereof. The sequences of the invention were identified using oncogenic retroviruses, which insert into the genome of the host organism at random. Many of these do not carry transduced host oncogenes or pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host protooncogenes. The CA nucleic acid sequences can be used to diagnose carcinoma (especially breast cancer, proseate cancer, integration into host protooncogenes. The CA nucleic acid sequences can be used to diagnose carcinoma (especially breast cancer, proseate cancer, integration into host leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular tissues. CA nucleic acids, proteins and antibodise are also useful as therement agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed human CA nucleic acid sequence of the invention. Note: The complete sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                         The invention relates to recombinant carcinoma associated (CA) nucleic

The compositions of the invention may have cytostatic activity whilst the disclosed sequences may be useful for gene therapy. The carcinoma associated nucleic acids and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cancer diagnosis; cancer treatment; carcinoma; cytostatic; gene therapy; lymphoma; breast cancer; prostate cancer; leukaemia; ds; human, 2PHXIB.
                                                                                                                                                                                                                                                                                                                     recombinant nucleic acid, useful for treating carcinomas, lymphomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 96589 BP; 29004 A; 18509 C; 19494 G; 29562 T; 0 U; 20 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gapa

```

proteins are useful for diagnosing and treating carcinomas, for example lymphoma, breast cancer, prostate cancer or leukaemia, or for screening drug candidates or bioactive agents capable of binding to, or modulating the activity of, a carcinoma associated protein. The present sequence is the genomic DNA sequence of the human ZFHXIB gene which is a carcinoma associated gene of the invention. 888888888

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

```
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation and not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TREMBL; Swi, SWISSPROT; Tr:, TRE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 http://www.chori.org/bacpac/home.htm
VECTOR: pBAC63.6
IMPORTATY: This sequence is not the entire insert of clone
RP11-147111 It may be shorter because we sequence overlapping
sections only once, except for a 100 base overlap.
The true right end of clone RP11-147111 is at 110098 in this
sequence. The true right end of clone RP11-143M1S is at 100 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr9
RP11-147111 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see
                                 requests: clonerequest@sanger.ac.uk on or before May 15, 201 this sequence version replaced gi:7798790, gi:1296443: During sequence assembly data is compared from overlapping clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        //note="LiMC4 repeat: matches 7681, .7936 of consensus"

variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSROT; Tr:, TREMBL; WP:, WORMDEP; Information on the WORMDEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chf6
RRI-90120 is from the library RPCI-I constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

                                                                                                      During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission colly a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Ems., EMBL: Sw.; SWISSERCY; Tr.; TREMBL; Wp.; WORNPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep Clone-derived Length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be enhanced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning dar were identified by Rick Waterman (Stephen Johnson lab, Washu). On Dec 18, 2001 this sequence version replaced gi:14041741.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
NOTE: This is a 'working draft' sequence. It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Quality coverage: 6.2 in Q20 bases; agarose-fp
